

Fraud Investigation Standard Operating Procedure

Fraud analysts must follow a structured investigation approach when reviewing suspicious transactions.

Step 1 – Alert Verification

Confirm that the fraud alert generated by the monitoring system corresponds to a valid transaction event.

Step 2 – Transaction Analysis

Review transaction attributes such as time, location, merchant category, and amount.

Step 3 – Customer Behaviour Review

Compare the suspicious transaction with historical transaction patterns of the customer.

Step 4 – Risk Score Evaluation

Check the fraud risk score assigned by the monitoring system and determine whether the alert exceeds defined risk thresholds.

Step 5 – Customer Contact

If necessary, contact the customer to verify whether the transaction was authorized.

Step 6 – Case Resolution

Decide whether to mark the alert as false positive, escalate for further investigation, or block the associated account.
